

## Fungi, Algae, Lichens & Slime Moulds - species seen in Selsdon Wood

We have a booklet entitled "*Selsdon Wood Nature Reserve - Its history and Management: Some records of Flora and Fauna*" which was produced in 1978 by Jack Penry-Jones on behalf of the Croydon Natural History and Scientific Society. This lists the fungi seen in a survey of 1976 - these observations were undated so we do not know the month.

Regular observations began in 2010 and the information in each column shows the month in which the fungus was first observed in a particular year. If this is not known just a tick is recorded. As will be seen most fungi are seen in the autumn and winter months. The "Where" column gives an indication of the type of location or a specific location where the fungus recurs in the same place. The letter P indicates that there is a photograph on the FSW website and the month it was taken. A **red** highlight shows that this is a species newly observed this year. The full date is in the photo caption on the website. Species that have been observed but not photographed in Selsdon Wood are shown in red text. These 26 species are not included in the count in the right hand column as there is no direct evidence of the sighting.

Although lichens and slime moulds are unrelated, both are related to algae, which is why they have been grouped here. No observations of any of these were recorded in the 1978 Penry-Jones booklet.

Lichens are composite organisms; life forms comprised of two distinct species - an intertwined fungus and alga - hence their inclusion here with the fungi listing. They are probably the most difficult of all to identify - advanced laboratory facilities are needed for certainly with many species to carry out molecular, thermal and elementary analysis. Even visual IDs should really only be done when they are fruiting and dry. Our identifications are thus tentative.

Slime Moulds are essentially masses of protoplasm without distinct cells. They can move, creeping along a surface to find more food. Slime Moulds are classified in the kingdom protista, along with algae and protozoans.

Records with **green** highlight (or green text for red highlighted species) show species seen on our annual guided fungi walks.

2010 - walk with JM 26/9/10      2011 - walk with JM 9/10/11      2012 - walk with JM 14/10/12      2013 - walk with JM 13/10/13      2014 - walk with TF & TF on 12/10/14  
2015 - walk with TF & TF on 11/10/15      2016 - walk with TF & TF on 9/10/16      2017 - walks with TF & TF on 8/10/17 and 15/10/17      2018 - walk with TF and TF on 6/10/18
