

Grasses, Sedges & Rushes - species seen in Selsdon Wood

We have a booklet entitled "Selsdon Wood Nature Reserve - Its history and Management: Some records of Flora and Fauna" which was produced in 1978 by Jack Penry-Jones on behalf of the Croydon Natural History and Scientific Society. This contains a list of "Flowering Plants and Ferns (including trees, shrubs, grasses and sedges)" Recorded by Raymond Clarke of the CNHS prior to publication in 1978. These FSW species lists subdivide the collection into four separate lists: Trees; Wild Flowers; Grasses; and Non Flowering Plants.

This list of Grasses is listed in alphabetical order of common name. We currently have photographs and identification of 19 species. Most grasses are found within the fields but some are woodland species and this is recorded in the Notes column.

Species with records in the Penry-Jones booklet recorded with a tick in the 1978 column. Those not since 1978 or only recently identified within Selsdon Wood are shown in red. We would welcome photographs of any sightings of these.

Grasses are very difficult for amateurs to identify. However we are delighted to report that we were contacted in 2014 by a Danish biologist, Mogens Holmen, who visited our wood in May while on a visit to friends in the UK and identified and photographed 8 species of grass. We thus have greater confidence in these identifications - the others should be considered as tentative. The 2021 HG sightings were supported by a plant identification app called Picture This - see below. The June 6 2021 sightings were made by Malcolm Jennings on the Flower Walk
